

CineMe

Interactive movie database where the user will be able to personalize and create their own watchlist based of keyword search and genre.

Elevator Pitch

Individuals may have trouble deciding what movie to watch and waste time searching through the wrong genres or websites.

CineMe is an application that not only lets you search movies to add to your own watchlist, but suggests movies for a user based on the genre searched as well. In addition to the movie title suggestions, comments regarding the specific movie can be made and seen on the page along with the option for the user to leave a star rating.

Use CineMe to help you browse and create an easy watchlist to refer back to and pick the perfect movie!

Concept

- Description - A secure webpage that allows you to create a watchlist by simply searching movies and viewing recommendations based on various genres.
- Motivation for development - Deciding what movies to watch can be tough especially when multiple people are involved. Hard to remember recommended movies or previously watched movies.

- User story -
-

AS A user I want a search any movie by keywords or genre

I WANT TO Be able to save/interact with those results and create a watchlist

SO THAT I can easily refer back to my watchlist when I log in whenever needed and view my future, current, and past picks.

Process

- Breakdown of tasks and roles

- HTML/CSS - Saineha Shetty
- JavaScript - Christopher Zavala, Dan Johnston, Rick Martinez, Saineha Shetty
- JavaScript/API routes - Christopher Zavala

- JavaScript/SQL - Rick Martinez
- JavaScript/Handlebars- Dan Johnston
- PPT - Saineha Shetty

- Technologies used

- Bootstrap
- Bulma CSS: <https://bulma.io/>
- Axios

- Challenges

- Github push and pulls
- Pushing to Heroku
- Having trouble sourcing and embedding images
- Bulma/Bootstrap clashes

- Successes

- Able to create a watchlist with rating bar (stars)
- creating comment section on dashboard
- Animation on homepage
- Creating an immersive user experience:)

Demo

Directions for Future Development

- Incorporate more search criteria to help narrow down search results by genre
- Add a social and communicative aspect that will display the yearly/monthly user data of the movies the user watched
- Pull movie results that are specific to a country
- Add animation to the backgrounds (tailwind)
- Suggested trailer for the movie
- Incorporate Firebase (realtime chat)
- Grow database to TV shows etc.
